Nitrogen and oxygen has five and six electrons respectively. Because two oxygen atoms exist, there are 12 valence electrons. Due to -1 charge, one more electron comes to contribute to valence electrons. So number of total valence electrons is 5 + 12 + 1 = 18.

Total valence electrons pairs. Total valence electrons pairs =  $\sigma$  bonds +  $\pi$  bonds + lone pairs at valence shells. Total electron pairs are determined by dividing the number total valence electrons by two. For, NO2-, there are 24 valence electrons, so total pairs of electrons are 12.

The electron dot or Lewis dot structure of P4,which is the constituent molecule of white phosphorus,can be easily drawn keeping in mind the facts that: 1)It has tetrahedral geometry. 2)Each P has 5 valence e-s and thus in P4 there are 5x4=20 valence e-s.
