Clams and oysters dominate the mollusk category, followed by scallops, mussels, and abalone. Total mollusk production exceeds 15 million metric tons annually. Despite the popularity of lobsters, the primary crustaceans produced in the world are shrimp, with the majority of those coming from salt water.

exposed to potential ocean health threats such as toxic algae or poor water quality 24 hours a day, seven days a week.

What does the ocean have to do with human health?

The ocean has always been an important source of food for the life it helped generate, and from earliest recorded history it has also served trade and commerce, adventure and discovery.

Oceans and the Law of the Sea | United Nations

Phytoplankton and algae form the bases of aquatic food webs. They are eaten by primary consumers like zooplankton, small fish, and crustaceans. Primary consumers are in turn eaten by fish, small sharks, corals, and baleen whales. Top ocean predators include large sharks, billfish, dolphins, toothed whales, and large seals.
